

These square nubs will be used to align the cleat for final installation. These will be carved off by hand in the final fabrication/sculpting phase.

The "RWC" letters will need to be a separate layer, so that they can be engraved into the HDU.

The "rews" letters are not shown here - these letters will be cut from a separate sheet of 1" HDU. We will need to use a pin system to attach and align the letters to the 2" HDU slab. Please put pin holes on this slab that align with the holes on the back of the "rews" letters.
