

Logo Detail

Please indicate that 1/2" HDU is an alternate to 1/4" acrylic and may help with balancing/deflection. HDU foam will be around 1 lb lighter than acrylic.

- 1/2" HDU foam / painted Benjamin Moore Snowfall White OC-118
- attached to fins with a Pin system
- Hardware will be covered with letters:

Hardware will consist of 1/8" thick threaded rods glued into the back of the Tinder logo letters. The threaded rods will be inserted through pre-drilled holes in the acrylic fins, with nuts to tighten the threaded rods (with appropriate washers to protect the acrylic). Spacers to make sure that all the letters are mounted evenly.

We can try to source discreet hardware if we decide to go this route - but there will be hardware visible from the back

Another interesting option to explore could be to laser etch the tinder logo onto the acrylic.
